

NOTICE DATE: November 7, 2005

NOTICE TYPE: Notice of System Change (PRR)

SHORT DESCRIPTION: Implementation of PRR514 - Twelve Month Window for Non-IDR Scaling and PRR544 -Twelve Month Window for Scaling NIDR to IDR ESI Ids

INTENDED AUDIENCE: QSE Settlement personnel

DAY AFFECTED: Data Aggregation runs starting Thursday November 17, 2005

LONG DESCRIPTION:

PRR 514 - Twelve Month Window for Non-IDR Scaling

After implementation of PRR514, any active ESI ID on the Operating Day being settled for which ERCOT does not have a meter read within twelve (12) months of the Operating Day will not have a usage estimate applied to their Load Profile in accordance with Section 11.4.2, Non-Interval Missing Consumption Data Estimation. This time frame was previously six (6) months. If the meter read stoptime is not within 12 months of the operating day, the usage allocated to the ESI ID for that operating day will be equal to the load profile (no scaling applied).

PRR 544 - Twelve Month Window for Scaling NIDR to IDR ESI IDs

PRR544 concerns ESI IDs that had recently transitioned from NIDR to IDR. After implementation of this PRR, if non-interval consumption data with a meter read within twelve (12) months of the Operating Day is available, and if the ESI ID was profiled with a non-interval meter data type code within ninety (90) days of the Operating Day, the default profile shall be estimated and/or scaled in accordance with Section 11.4.3, Interval Consumption Data Estimation. Previously, the timeframe was six (6) months. If the meter read stoptime is not within 12 months of the operating day, the usage allocated to the ESI ID for that operating day will be equal to the load profile (no scaling applied).

Effective November 17, 2005, all aggregation runs (Initial, Final, True-Up & Re-Settlement) will utilize the 12-month window.

ADDITIONAL INFORMATION:

PRR514 and PRR544 are posted in the Protocol section of the ERCOT website at:
