

# TAC Update to Board:

## Consideration of Temporary Change to 2005 Annual Validation

**ERCOT Board**  
**February 21, 2006**

## 2005 Annual Validation Events

### **For Residential ESI ID Profiles:**

- RMS recommended and TAC approved the suspension of 2005 residential Annual Load Validation for residential ESI IDs pending completion of the residential electric heat survey and creation of a new residential profile assignment algorithm .
- On 09/20/05, the ERCOT Board approved recommendation but required that the suspension be resumed by 12/31/05.
- ERCOT staff successfully completed the residential electric heat survey and created a new algorithm using the survey results.
- The new algorithm was applied to the originally selected profile migration pool.
- RMS recommended and TAC approved Market Participants to move forward with 2005 Residential Annual Validation transactions for those ESI IDs for which ERCOT's analysis indicated movement to a more representative profile.

## 2005 Annual Validation Status

- In December 2005, RMS approved the PWG recommendation that RMS authorize Market Participants *not* to send the remaining transactions for residential ESI IDs.
- This recommendation requires a change to the 2005 Annual Validation process.

## Voting Item for 2005 Annual Validation

TAC requests that the Board approve a temporary change to the 2005 Annual Validation authorizing Market Participants to *not* submit the 2005 Residential Annual Validation transactions for those ESI IDs that would, based on ERCOT's analysis, be assigned a less representative profile.

This temporary change waives the requirements for the final validation steps as specified in the Load Profiling Guide, Section 11.4.1, paragraphs 11 and 12.

*TAC unanimously approved this recommendation at its February 2, 2006 meeting.*
