EILS Issues Identified at Stakeholder Meeting

Issue	Description	Responsibility	Status
Performance calculation changes	– Technical changes to EILS performance calculations	Carl Raish (ERCOT)	
Baseline	– Need for a third baseline methodology to accommodate variable loads	Joel Obillo (EnerNOC) Roger Yott (Air Products) Dianne Wahl (Suez)	
Granularity	– Determine whether ERCOT has the ability to settle in less than 1MW increments	Paul Wattles and Steve Krein (ERCOT)	Completed
Testing	– Develop protocol change to allow ability to add new resources to an existing aggregation without subjecting the entire aggregation	Alberto Martinez (Consumer PowerLine) Joel Obillo (EnerNOC)	
Suspension	– Develop protocol change to allow ERCOT to suspend individual resources for non-performance without suspending an entire aggregation	Joel Obillo (EnerNOC) Paul Wattles and Steve Krein (ERCOT)	Deferred at ERCOT's request
Variable notice	– Determine whether the EILS program could provide 30 minute notice to some subset of load resources	Tim Carter (Constellation)	
Split deployment	– Develop a process to assign load resources to random groups to allow ERCOT to split the deployment of the total EILS resource	TBA
