Proposed near-term changes to remove technical barriers for participation of energy storage resources in ERCOT.

- Issue: HSL Test
  - ERCOT should limit HSL test to 15 minutes.
  - As discussed in PSWG, a test confirms capabilities. Ongoing performance requirements are measured and enforced in other ways.
  - **Protocol change: 8.1.1.2 "shall hold it at that output level for a minimum of 30 <u>15</u> minutes"**
- Issue: LSL
  - In Zonal and LFC trials, both positive (reg up) and negative (reg down) signals were sent to storage resource.
  - In Nodal no negative numbers are sent.
  - **Change: Reinstate negative LSL.**
