PLWG Meeting February 29, 2012

Initiator	Agenda Item 6.a.	Action required from PLWG
PLWG Reference posted documents: 1) Issues List Item – RARF Interface	From PLWG Issues List: How to allow for corrections submitted by non generation entities. How to revise RARF to meet revised input requirements. Tuning of data used in models (e.g., stability data). Maybe could be included in ERCOT effort to get contractor to work on "total" data process. On 10/28 the PLWG was in consensus that the issue was addressed thru the RARF workshop, except for the need for a process for ERCOT to extract updated information from the RARF and post as interim update to case (idev/PMCR). From January 2012 PLWG Meeting • At the January 2012 meeting PLWG inquired on the status of the workshop/RARF project. PLWG requested an ERCOT representative provide status report on the RARF project. • What is being done about RARF requirements for emerging technology elements. DC batteries. • Can ERCOT identify areas where PLWG can assist in completing this project?	TBD
