

**FINAL**  
**Seasonal Assessment of Resource Adequacy for the ERCOT Region**  
**Spring 2015**

**SUMMARY**

The ERCOT Region is expected to have sufficient installed generating capacity to serve forecasted peak demands with expected generation outages in the upcoming spring season (March - May 2015).

For this assessment, the peak capacity percentages for wind resources are based on new capacity percentages approved by the ERCOT Board of Directors in October 2014: 19 percent for non-coastal resources and 36 percent for coastal resources.

Notable capacity reductions since the preliminary spring SARA report was released include the three R.W. Miller gas-fired steam units (spring capacity rating of 403 MW), which are now on extended outage due to lack of cooling water. Based on ERCOT's drought risk analysis, no other changes to unit capacities due to drought conditions are anticipated or reflected in this spring assessment. Additionally, capacity for the Notrees Battery Storage facility was changed from 34 MW to zero MW because the facility provides regulation reserves in the Ancillary Services market and is not available to deliver energy on a sustained hourly basis.

This SARA report includes a forecast of 8,292 MW of unit outages, based on historical outage data since the start of the Texas Nodal Market in December 2010, and assumes the high likelihood that the spring peak will occur in May, following completion of most scheduled seasonal maintenance. While a significant amount of unit maintenance is conducted during the spring season, much of this maintenance is completed prior to the onset of hotter temperatures (and resulting higher electricity demand) in late May.

At this time, ERCOT does not anticipate changes to available generation capacity for the spring season due to compliance with the Cross-State Air Pollution Rule (CSAPR) or Mercury and Air Toxics Standards (MATS). CSAPR came into effect on January 1, 2015, and the compliance deadline for the MATS rule for units that have not received compliance extensions is April 15, 2015. ERCOT continues to monitor implementation and consults with generation resource owners on their compliance plans for CSAPR, MATS and other environmental regulations.

**Seasonal Assessment of Resource Adequacy for the ERCOT Region**  
**Spring 2015 - FINAL**  
**Release Date: March 2, 2015**

**Forecasted Capacity and Demand**

|  |        |   |
|--|--------|---|
| Operational Resources (excluding wind), MW                           | 65,042 | Based on current Seasonal Maximum Sustainable Limits reported through the unit registration process   |
| Switchable Capacity Total, MW  | 3,702  | Installed capacity of units that can switch to other Regions and are available to ERCOT   |
| less Switchable Capacity Unavailable to ERCOT, MW                    | (470)  | Based on survey responses of Switchable Resource owners   |
| Mothball Resources, MW   | 820    | Seasonal mothball capacity, based on Notification of Generation Resource Designation  |
| Private Use Network Capacity Contribution, MW                        | 4,318  | Average capability of the top 20 hours in the winter seasons for the past three years (2011-2013)   |
| Capacity Contribution of Non-Coastal Wind Resources, MW              | 2,070  | Based on 19% of installed capacity for non-coastal wind resources per ERCOT Nodal Protocols Section 3.2.6.2.2 and approved NPRR 611                   |
| Capacity Contribution of Coastal Wind Resources, MW                  | 605    | Based on 36% of installed capacity for coastal wind resources per ERCOT Nodal Protocols Section 3.2.6.2.2. and approved NPRR 611                      |
| RMR Resources to be under Contract, MW                               | 0      | No RMR Resources currently under contract   |
| Non-Synchronous Ties Capacity Contribution, MW                       | 495    | Average capability of the top 20 hours in the winter seasons for the past three years (2011-2013)   |
| Planned Resources (not wind) with signed IA and Air Permit, MW       | 0      | Based on in-service dates provided by developers of generation resources  |
| Capacity Contribution of Planned Non-Coastal Wind with signed IA, MW | 38     | Based on in-service dates provided by resource developers and 19% of installed capacity for non-coastal wind resources (winter percentage value used) |
| Capacity Contribution of Planned Coastal Wind with signed IA, MW     | 0      | Based on in-service dates provided by generation developers and 36% of installed capacity for coastal wind resources (winter percentage value used)   |
| [a] Total Resources, MW  | 76,619 |   |
| [b] Peak Demand, MW  | 61,957 | Spring peak forecast is based on normal weather conditions for 2002 – 2013  |
| [c] Reserve Capacity [a - b], MW                                     | 14,662 |   |

## Seasonal Assessment of Resource Adequacy for the ERCOT Region

### **Background**

The Seasonal Assessment of Resource Adequacy (SARA) report is a deterministic approach to considering the impact of potential variables that may affect the sufficiency of installed resources to meet the peak electrical demand on the ERCOT System during a particular season.

The standard approach to assessing resource adequacy for one or more years into the future is to account for projected load and resources on a normalized basis and to require sufficient reserves (resources in excess of peak demand, on this normalized basis) to cover the uncertainty in peak demand and resource availability to meet a one-in-ten-years loss-of-load event criteria on a probabilistic basis.

For seasonal assessments that look ahead less than a year, specific information may be available (such as seasonal climate forecasts or anticipated common-mode events such as drought) which can be used to consider the range of resource adequacy in a more deterministic manner.

In contrast to the Capacity, Demand and Reserves (CDR) report, which addresses the sufficiency of planning reserves on an annual basis as described above, the SARA report focuses on the availability of sufficient operating reserves to avoid emergency actions such as deployment of voluntary load reduction resources. Consequently, load reduction resources included in the CDR report, such as Emergency Response Service (ERS) and Load Resources that provide operating reserves (LRs), are excluded from the SARA.

The SARA report is intended to illustrate the range of resource adequacy outcomes that might occur, and thus help fulfill the reporting requirement per Public Utility Commission of Texas rule 25.362(i)(2)(H). Several sensitivity analyses are developed by varying the value of certain parameters that affect resource adequacy. The variation in these parameters is based on historic values of these parameters or adjustments by any known or expected changes.
