Definitions

Mothballed Unit

A generation resource for which a generation entity has submitted a Notification of Suspension of Operations, for which ERCOT has declined to execute an RMR agreement, and for which the generation entity has not announced retirement of the generation resource. A seasonal mothballed unit is one in which the generation entity requests a seasonal operation period that must include the summer Peak Load Season, June 1 through September 30.

Mothballed Capacity

Capacity that is designated as mothballed by a generating unit's owner as described above, and which is not available for operations during the summer Peak Load Season (June, July, August and September) or winter Peak Load Season (December, January and February).

Available Mothballed Capacity based on Owner's Return Probability

Mothballed capacity with a return-to-service probability of 50% or greater for a given season of the year, as provided by its owner, constitutes available mothballed generation. Return probabilities for individual units are considered protected information under the ERCOT Protocols and therefore are not included in this report.

Forecast Zone

Forecast Zones generally have the same boundaries as the 2003 Congestion Management Zones with the following exceptions: A) Panhandle Zone for resources in the Texas Panhandle counties and outside the 2003 Congestion Management Zones, and B) Coastal Zone for resources in 11 counties along the Texas Gulf Coast and formerly in the South Zone of the 2003 Congestion Management Zones.

LRs (Load Resources)

Load capable of reducing or increasing the need for electrical energy or providing Ancillary Services to the ERCOT System, as described in the ERCOT Protocols, Section 6, Ancillary Services. These Resources may provide the following Ancillary Services: Responsive Reserve Service, Non-Spinning Reserve Service, Replacement Reserve Service, and Regulation Service. The Resources must be registered and qualified by ERCOT and will be scheduled by a Qualified Scheduling Entity (QSE).

Non-Synchronous Tie

Any non-synchronous transmission interconnection between ERCOT and non-ERCOT electric power systems.

Private Use Networks

An electric network connected to the ERCOT transmission grid that contains load that is not directly metered by ERCOT (i.e., load that is typically netted with internal generation).

Reliability Must-Run (RMR) Unit

A generation resource unit operated under the terms of an agreement with ERCOT that would not otherwise be operated except that they are necessary to provide voltage support, stability or management of localized transmission constraints under first contingency criteria.

Signed SGIA (Standard Generation Interconnection Agreement)

An agreement that sets forth requirements for physical connection between an eligible transmission service customer and a transmission or distribution service provider.

Switchable Unit

A generation resource that can be connected to either the ERCOT transmission grid or a grid outside the ERCOT Region.

Wind Seasonal Peak Average Capacity Percentage

The average wind capacity available for the summer and winter Peak Load Seasons for a region (non-coastal / coastal) divided by the installed capacity for the region, expressed as a percentage. Details for the derivation of the percentages are outlined in ERCOT Protocol Section 3.2.6.2.2 (see http://www.ercot.com/content/wcm/current_guides/53528/03_030115_Nodal.doc).

Wind Peak Average Capacity Contribution

The seasonal net capacity rating of wind resources multiplied by the Seasonal Peak Average Capacity Percentage for non-coastal and coastal regions.

Wind Regions

The coastal wind region comprises the following 11 Texas counties along the southern Gulf Coast: Cameron, Willacy, Kenedy, Kleberg, Nueces, San Patricio, Refugio, Aransas, Calhoun, Matagorda, and Brazoria. The non-coastal region consists of all other counties in the ERCOT Region.

CDR Report - Executive Summary

The methodology for developing this report is defined in Section 3.2.6 of the ERCOT Protocols (see: http://www.ercot.com/content/wcm/current_guides/53528/03_030115_Nodal.doc). ERCOT has developed this report using data provided by resource developers/owners and by transmission service providers. Although ERCOT works to ensure that the data provided are as accurate and current as possible, ERCOT cannot independently verify all of the information provided. Information available to ERCOT as of April 22, 2015, is included in this report.

Planning reserve margins for 2017 and beyond increased since the release of the December 2014 CDR report. The higher planning reserve margins are mainly due to a number of planned gas-fired combined-cycle projects that recently finalized the necessary agreements and permits to be included in the CDR report. These projects include the Indeck Wharton Energy Center (700 MW, projected availability in April 2017), Pondera King Project (882 MW, projected availability in August 2017), and the Pinecrest Energy Center (785 MW, projected availability in June 2017). In aggregate, Planned Resources that are now eligible to be included in the CDR report include 2,592 MW fueled by natural gas (summer capacity rating), 1,491 MW of nameplate wind capacity (372 MW summer peak average capacity contribution), and 460 MW of nameplate solar capacity.

Planned capacity that entered commercial operations since the release of the December 2014 CDR report includes 1,389 MW of nameplate wind capacity (with a summer peak average capacity contribution of 167 MW) along with 29 MW of nameplate solar capacity. Total installed solar capacity in the ERCOT Region now totals 198 MW.

ERCOT did not factor into the CDR potential resource capacity impacts of several U.S. Environmental Protection Agency (EPA) regulations that are being implemented or have been proposed, the most immediate of which is the forthcoming Regional Haze Program Final Rule establishing a Federal Implementation Plan (FIP) for Texas. The Final Rule is expected in September 2015, and, as proposed, would require scrubber upgrades or retrofits at 12 coal-fired units in ERCOT with a 2018-2020 compliance period. ERCOT continues to analyze the anticipated impacts of these regulations on resource adequacy. As ERCOT receives additional information about operational changes and unit retirements, it will incorporate this information in future CDR reports.

Summer Fuel Types - ERCOT

Fuel type is based on the primary fuel. Capacity contribution of the wind resources is included at 12% for Non-Coastal and 56% for Coastal counties. Private Use Network, Hydro and Non-Synchronous Tie resources are included based on the three-year average historical capability for each Summer Season 20 peak load hours. Non-Synchronous Tie resources are categorized as Other. Mothballed resource capacity is excluded except for Available Mothball Capacity based on Owner's Return Probability.

In Megawatts (MW)

Winter Fuel Types - ERCOT

Fuel type is based on the primary fuel. Capacity contribution of the wind resources is included at 18% for Non-Coastal and 37% for Coastal counties. Private Use Network, Hydro and Non-Synchronous Tie resources are included based on the three-year average historical capability for each Winter Season 20 peak load hours. Non-Synchronous Tie resources are categorized as Other. Mothballed resource capacity is excluded except for Available Mothball Capacity based on Owner's Return Probability.
