

**PRELIMINARY**  
**Seasonal Assessment of Resource Adequacy for the ERCOT Region**  
**Winter 2015/2016**

**SUMMARY**

The ERCOT Region is expected to have sufficient installed generating capacity to serve forecasted peak demands in the upcoming winter season (December 2015 - February 2016). Based on the results of this study, an extreme higher-than-normal number of forced generation outages occurring during a period of unusually high demand would be unlikely to result in insufficient resources being available to serve those demands. Even if those conditions coincide with extremely low temperatures and associated capacity reductions resulting from natural gas curtailments, current information indicates that there would be sufficient generation available on a systemwide basis.

This capacity outlook also includes our latest peak forecast expectations based on customer demand experienced during recent winter season cold-weather events and current expectations for average weather in the upcoming winter season. The seasonal demand forecast may be adjusted with an updated season-specific weather outlook prior to release of the final assessment in November.

ERCOT will continue to monitor the potential effect of future drought conditions on generation capacity and ongoing changes to environmental regulations.

**Seasonal Assessment of Resource Adequacy for the ERCOT Region**  
**Winter 2015/2016 - Preliminary**  
**Release Date: September 1, 2015**

**Forecasted Capacity and Demand**

Operational Resources (excluding wind), MW	66,634	Based on current ratings reported through the unit registration process
Switchable Capacity Total, MW	3,702	Rated capacity of resources that can interconnect with other regions and are available to ERCOT
less Switchable Capacity Unavailable to ERCOT, MW	(470)	Based on survey responses of Switchable Resource owners
Mothball Resources, MW	0	Based on seasonal Mothball units plus Probability of Return responses of Mothball Resource owners
Private Use Network Capacity Contribution, MW	4,433	Average capability of the top 20 hours in the winter peak seasons for the past three years
Non-Coastal Wind Resources Capacity Contribution, MW	2,141	Based on 18% of rated capacity for non-coastal wind resources per Nodal Protocols Section 3.2.6.2.2
Coastal Wind Resources Capacity Contribution, MW	622	Based on 37% of rated capacity for coastal wind resources per Nodal Protocols Section 3.2.6.2.2
RMR Resources to be under Contract, MW	0	No RMR resources currently under contract
Non-Synchronous Ties Capacity Contribution, MW	371	Average capability of the top 20 hours in the winter peak seasons for the past three years
Planned Resources (not wind), MW	348	Based on projected dates provided by developers of generation resources
Planned Non-Coastal Wind, MW	336	Based on projected dates and 18% of rated capacity for non-coastal wind resources
Planned Coastal Wind, MW	136	Based on projected dates and 37% of rated capacity for coastal wind resources
<hr/> [a] Total Resources, MW	78,253	
[b] Peak Demand, MW	57,400	Peak forecast is based on expected demand and weather conditions for winter 2015.
[c] Reserve Capacity [a - b], MW	20,853	

**Range of Potential Scenarios**

	Forecasted Season Peak Load	Extreme Load / Typical Generation Outages	Extreme Load / Extreme Generation Outages
Peak Load Adjustment (1)	0	3,434	3,434
Typical Maintenance Outages (2)	3,972	3,972	3,972
Typical Forced Outages (2) (3)	3,756	5,268	5,268
Extreme Forced Outages (90th Percentile) (3)	0	0	4,585
<hr/> [d] Total Uses of Reserve Capacity	7,728	12,674	17,259
<hr/> [e] Capacity Available for Operating Reserves (c-d), MW Less than 2,300 MW indicates risk of EEA1	13,125	8,179	3,594
<hr/> (1) Winter Peak Load Extreme Forecast is 60,834 MW. (2) Maintenance Outages and Forced Outages based on average of historical outage data for December, January and February weekdays (starting in 2010). Includes typical outages/derates due to natural gas curtailments during extreme peak load hours. (3) Extreme Forced Outages include forecasted derates due to natural gas curtailments at low ambient temperatures during extreme peak load hours.			

## Unit Capacities - Winter

## Seasonal Assessment of Resource Adequacy for the ERCOT Region

### Background

The Seasonal Assessment of Resource Adequacy (SARA) report is a deterministic approach to considering the impact of potential variables that may affect the sufficiency of installed resources to meet the peak electrical demand on the ERCOT System during a particular season.

The standard approach to assessing resource adequacy for one or more years into the future is to account for projected load and resources on a normalized basis and to require sufficient reserves (resources in excess of peak demand, on this normalized basis) to cover the uncertainty in peak demand and resource availability to meet a one-in-ten-years loss-of-load event criteria on a probabilistic basis.

For seasonal assessments that look ahead less than a year, specific information may be available (such as seasonal climate forecasts or anticipated common-mode events such as drought) which can be used to consider the range of resource adequacy in a more deterministic manner.

In contrast to the Capacity, Demand and Reserves (CDR) report, which addresses the sufficiency of planning reserves on an annual basis as described above, the SARA report focuses on the availability of sufficient operating reserves to avoid emergency actions such as deployment of voluntary load reduction resources. Consequently, load reduction resources included in the CDR report, such as Emergency Response Service (ERS) and Load Resources that provide operating reserves (LRs), are excluded from the SARA.

The SARA report is intended to illustrate the range of resource adequacy outcomes that might occur, and thus help fulfill the reporting requirement per Public Utility Commission of Texas rule 25.362(i)(2)(H). Several sensitivity analyses are developed by varying the value of certain parameters that affect resource adequacy. The variation in these parameters is based on historic values of these parameters or adjustments by any known or expected changes.
