English	16-Dec-16	<p>the smart meter is a great application to track electricity consumption. Is it possible to add two features: 1. Daily or weekly alerts to monitor consumption without having to login into website. 2. how about adding a budget column where the user can specify their daily, weekly, or monthly consumption target which can be compared to actual consumption</p> <p>Thanks for listening to my input and keep up this great application</p>
English	14-Dec-16	<p>Can you modify the exported CSV report to include the address of the property. I have multiple properties to monitor and the reports all look the same when you provide them without an address.</p>
English	14-Dec-16	<p>I have noticed a pattern for when I have difficulty logging in. When I click log in, immediately the box on the left is displayed that there is a log in error so I quickly try again. What I only noticed recently is even though the error message is displayed, the circular thinking symbol is still moving on the Smart Meter tab in my Google Chrome . When I just wait until the screen refreshes, the error box goes away and I am then logged in. Could you make the red error box not be displayed so quickly?</p>
English	13-Dec-16	<p>Do not understand a thing! This website tells me nothing.</p>

English	13-Dec-16	<p>I use this site regularly to manage my electric usage. It is very helpful. Is there any chance that the total KWH for the day be added to the 15 minute display ? Also, the default date range for the daily display is now just the last day. It used to default to a range of the last 30 (???) days or so which was much more useful. Was this changed intentionally ? Could it be changed back or at least extended to a week or more ? Thanks!</p>
English	12-Dec-16	<p>Why don't you post information about In Home Devices? I want realtime monitoring but can't find where to look.</p>
