**PRELIMINARY
Seasonal Assessment of Resource Adequacy for the ERCOT Region (SARA)
Summer 2019**

SUMMARY

The Electric Reliability Council of Texas (ERCOT) expects record electric use this summer and an increased chance of energy alerts.

"Prior to each season, we consider a range of potential risks to determine whether there will be sufficient capacity to meet the expected peak load forecast," said ERCOT President and CEO Bill Magness. "In all of the scenarios studied, we identified a potential need to call an energy alert at various times this summer."

When ERCOT declares an alert, it can then take advantage of additional resources that are only available during scarcity conditions. These resources include demand response products, resources that are normally set aside to provide operating reserves (including contracted load reduction from some industrial facilities), additional generation or imports from neighboring regions and voluntary calls for conservation by consumers.

Total resource capacity for the upcoming summer is expected to be 78,154 MW. The preliminary summer SARA report includes a 74,853 MW summer peak load forecast based on average summer peak weather conditions for 2003-2017.

The final summer SARA report will be released in May and will reflect the expected summer weather conditions.

Seasonal Assessment of Resource Adequacy for the ERCOT Region

Summer 2019 - Preliminary

Release Date: March 5, 2019

Forecasted Capacity and Demand

Operational Resources (thermal and hydro), MW	64,952	Based on current Seasonal Maximum Sustainable Limits reported through the unit registration process
Switchable Capacity Total, MW	3,516	Installed capacity of units that can interconnect with other Regions and are available to ERCOT
Less Switchable Capacity Unavailable to ERCOT, MW	(789)	Based on survey responses of Switchable Resource owners
Available Mothballed Capacity, MW	118	Based on seasonal Mothball units plus Probability of Return responses of Mothball Resource owners
Capacity from Private Use Networks, MW	3,437	Average capability of the top 20 hours in the summer peak seasons for the past three years (2016-2018)
Non-Coastal Wind, Peak Average Capacity Contribution, MW	2,882	Based on 15% of installed capacity for non-coastal wind resources (summer season) per ERCOT Nodal Protocols Section 3.2.6.2.2
Coastal Wind, Peak Average Capacity Contribution, MW	1,636	Based on 58% of installed capacity for coastal wind resources (summer season) per ERCOT Nodal Protocols Section 3.2.6.2.2
Solar Utility-Scale, Peak Average Capacity Contribution, MW	1,366	Based on 74% of rated capacity for solar resources (summer season) per Nodal Protocols Section 3.2.6.2.2
Storage, Peak Average Capacity Contribution, MW	-	Based on 0% of rated capacity; resources assumed to provide regulation reserves rather than sustained capacity available to meet peak loads
Capacity Pending Retirement, MW	-	Announced retired capacity that is undergoing ERCOT grid reliability reviews pursuant to Nodal Protocol Section 3.14.1.2
Non-Synchronous Ties Capacity Contribution, MW	430	Average net flows for the top 20 hours in the summer peak seasons for the past three years (2016-2018)
Planned Thermal Resources with Signed IA, Air Permits and Water Rights, MW	201	Based on in-service dates provided by developers of generation resources
Planned Non-Coastal Wind with Signed IA, Peak Average Capacity Contribution, MW	153	Based on in-service dates provided by developers and 15% summer capacity contribution for non-coastal wind resources
Planned Coastal Wind with Signed IA, Peak Average Capacity Contribution, MW	226	Based on in-service dates provided by developers and 58% summer capacity contribution for coastal wind resources
Planned Solar Utility-Scale, Peak Average Capacity Contribution, MW	28	Based on in-service dates provided by developers and a summer capacity contribution of 74% for solar resources
Planned Storage, Peak Average Capacity Contribution, MW	-	Based on in-service dates provided by developers and a summer capacity contribution of 0% for storage resources

[a] Total Resources, MW 78,154

[b] Peak Demand, MW 74,853 Based on average weather conditions at the time of the summer peak for 2003-2017

[c] Reserve Capacity [a - b], MW 3,301

Range of Potential Risks

	Forecasted Season Peak Load / Typical Generation Outages	Forecasted Season Peak Load / Extreme Generation Outages	Forecasted Season Peak Load / Extreme Low Wind Output	Extreme Season Peak Load / Typical Generation Outages	
Seasonal Load Adjustment	-	-	-	3,303	Based on extreme weather conditions using 2011's weather; the extreme summer forecast is 78,156 MW
Typical Maintenance Outages	381	381	381	381	Based on the historical average of planned outages for June through September weekdays, for the last three summer seasons (2016 - 2018)
Typical Forced Outages, Thermal	3,845	3,845	3,845	3,845	Based on historical average of forced outages for June through September weekdays, for the last three summer seasons (2016 - 2018)
90th Percentile Forced Outages, Thermal	-	2,665	-	-	Based on historical forced outages assuming a 90% confidence interval
Low Wind Output Adjustment	-	-	3,959	-	Based on the 10th percentile of wind output associated with the 100 highest Net Load hours (Load minus wind output) for the 2015-2018 summer Peak Load seasons; this wind output level is 960 MW.

[d] Total Uses of Reserve Capacity 4,226 6,891 8,185 7,529

[e] Capacity Available for Operating Reserves, Normal Operating Conditions [c - d], MW (925) (3,590) (4,884) (4,228) See the Background tab for additional details

Less than 2,300 MW indicates risk of EEA1

Seasonal Assessment of Resource Adequacy for the ERCOT Region

Background

The Seasonal Assessment of Resource Adequacy (SARA) report is a deterministic approach to considering the impact of potential variables that may affect the sufficiency of installed resources to meet the peak electrical demand on the ERCOT System during a particular season.

The standard approach to assessing resource adequacy for one or more years into the future is to account for projected load and resources on a normalized basis and to require sufficient reserves (resources in excess of peak demand, on this normalized basis) to cover the uncertainty in peak demand and resource availability to meet a probabilistic reliability standard.

For seasonal assessments that look ahead less than a year, specific information may be available (such as seasonal climate forecasts or anticipated common-mode events such as drought) which can be used to consider the range of resource adequacy in a more deterministic manner.

The SARA report focuses on the availability of sufficient operating reserves to avoid emergency actions such as deployment of voluntary load reduction resources. It uses an operating reserve threshold of 2,300 MW to indicate the risk that an Energy Emergency Alert Level 1 (EEA1) may be triggered during the time of the forecasted seasonal peak load. This threshold level is intended to be roughly analogous to the 2,300 MW Physical Responsive Capability (PRC) threshold for EEA1. However, PRC is a real-time capability measure for Resources that can quickly respond to system disturbances. In contrast, the SARA operating reserve reflects additional capability assumed to be available before energy emergency procedures are initiated, such as from Resources qualified to provide non-spinning reserves. Additionally, the amount of operating reserves available may increase relative to what is included in the SARA report due to the market responding to wholesale market price increases and anticipated capacity scarcity conditions. Given these considerations, ERCOT believes that the 2,300 MW reserve capacity threshold is a reasonable indicator for the risk of Energy Emergency Alerts given the uncertainties in predicting system conditions months in advance.

The SARA report is intended to illustrate the range of resource adequacy outcomes that might occur. It serves as a situational awareness tool for ERCOT operational planning purposes, and helps fulfill the "extreme weather" resource adequacy assessment requirement per Public Utility Commission of Texas rule 25.362(i)(2)(H). In addition to a base scenario, several other scenarios are developed by varying the value of load forecast and resource availability parameters. The variation in these parameters is based on historic ranges of the parameter values or known changes expected in the near-term. The SARA report is not intended to indicate the likelihood of any of these scenario outcomes.
