**PRELIMINARY
Seasonal Assessment of Resource Adequacy for the ERCOT Region (SARA)
Summer 2020**

SUMMARY

The Electric Reliability Council of Texas (ERCOT) expects record electric use this summer and grid conditions similar to summer 2019.

"ERCOT has added new electric supply resources, and strong economic growth continues to push up demand in ERCOT," said ERCOT President and CEO Bill Magness. "We expect grid operations to be very similar to last summer."

As in 2019, the need to declare an energy emergency will depend on a combination of factors, including demand, wind output and the number of generators on outage on any given day. ERCOT and its market participants are taking steps to ensure system reliability can be maintained during tight conditions.

Declaring an energy emergency allows the grid operator to take advantage of additional resources that are only available under these types of conditions. Additionally, the ERCOT wholesale market is designed to send appropriate price signals to encourage generators to be available when needed, and for customers to lower their energy use.

Total resource capacity for the upcoming summer season is expected to be 82,417 MW. The preliminary summer SARA report includes a 76,696 MW summer peak load forecast based on normal summer peak weather conditions from 2004 – 2018.

The final summer SARA report will be released in early May and will reflect the expected summer weather conditions.

Seasonal Assessment of Resource Adequacy for the ERCOT Region

Summer 2020 - Preliminary

Release Date: March 5, 2020

Forecasted Capacity and Demand

Operational Resources (thermal and hydro), MW	65,099	Based on current Seasonal Maximum Sustainable Limits reported through the unit registration process
Switchable Capacity Total, MW	3,490	Installed capacity of units that can interconnect with other Regions and are available to ERCOT
Less Switchable Capacity Unavailable to ERCOT, MW	(734)	Based on survey responses of Switchable Resource owners
Available Mothballed Capacity, MW	483	Based on seasonal Mothball units plus Probability of Return responses of Mothball Resource owners
Capacity from Private Use Networks, MW	3,366	Average grid injection during the top 20 summer peak load hours over the last three years, plus the forecasted net change in generation capacity available to the ERCOT grid pursuant to Nodal Protocol Section 10.3.2.4.
Coastal Wind, Peak Average Capacity Contribution, MW	2,073	Based on 63% of installed capacity for coastal wind resources (summer season) per ERCOT Nodal Protocols Section 3.2.6.2.2
Panhandle Wind, Peak Average Capacity Contribution, MW	1,279	Based on 29% of installed capacity for panhandle wind resources (summer season) per ERCOT Nodal Protocols Section 3.2.6.2.2
Other Wind, Peak Average Capacity Contribution, MW	2,587	Based on 16% of installed capacity for other wind resources (summer season) per ERCOT Nodal Protocols Section 3.2.6.2.2
Solar Utility-Scale, Peak Average Capacity Contribution, MW	1,728	Based on 76% of rated capacity for solar resources (summer season) per Nodal Protocols Section 3.2.6.2.2
Storage, Peak Average Capacity Contribution, MW	-	Based on 0% of rated capacity (summer season); resources assumed to provide regulation reserves rather than sustained capacity available to meet peak loads
RMR Capacity to be under Contract	-	
Capacity Pending Retirement, MW	-	Announced retired capacity that is undergoing ERCOT grid reliability reviews pursuant to Nodal Protocol Section 3.14.1.2
Non-Synchronous Ties, Capacity Contribution, MW	850	Based on import flows during most recent Energy Emergency Alert (EEA) intervals for the summer season.
Planned Thermal Resources with Signed IA, Air Permits and Water Rights, MW	101	Based on in-service dates provided by developers
Planned Coastal Wind with Signed IA, Peak Average Capacity Contribution, MW	468	Based on in-service dates provided by developers and 63% summer capacity contribution for coastal wind resources
Planned Panhandle Wind with Signed IA, Peak Average Capacity Contribution, MW	-	Based on in-service dates provided by developers and 29% summer capacity contribution for panhandle wind resources
Planned Other Wind with Signed IA, Peak Average Capacity Contribution, MW	518	Based on in-service dates provided by developers and 16% summer capacity contribution for other wind resources
Planned Solar Utility-Scale, Peak Average Capacity Contribution, MW	1,111	Based on in-service dates provided by developers and 76% summer capacity contribution for solar resources
Planned Storage, Peak Average Capacity Contribution, MW	-	Based on in-service dates provided by developers and 0% summer capacity contribution for storage resources
[a] Total Resources, MW	82,417	
[b] Peak Demand, MW	76,696	Based on average weather conditions at the time of the summer peak for 2004-2018
[c] Reserve Capacity [a - b], MW	5,721	

Range of Potential Risks

	Forecasted Season Peak Load / Typical Generation Outages	Forecasted Season Peak Load / Extreme Generation Outages	Forecasted Season Peak Load / Extreme Low Wind Output	Extreme Season Peak Load / Typical Generation Outages	
Seasonal Load Adjustment	-	-	-	3,251	Based on 2011 summer weather conditions; the extreme summer forecast is 79,947 MW
Typical Maintenance Outages	38	38	38	38	Based on the historical average of planned outages for July through August weekdays, hours ending 2 pm - 8 pm, for the last three summer seasons (2017 - 2019)
Typical Forced Outages, Thermal	4,031	4,031	4,031	4,031	Based on historical average of forced outages for June through September weekdays, hours ending 2 pm - 8 pm, for the last three summer seasons (2017 - 2019)
95th Percentile Forced Outages, Thermal	-	2,932	-	-	Based on the 95th percentile of historical forced outages for June through September weekdays, hours ending 2 pm - 8 pm, for the last three summer seasons (2017 - 2019); the adjustment is the 95th percentile value, 6,963 MW, less the typical forced outage amount of 4,031 MW
Low Wind Output Adjustment	-	-	5,302	-	Based on the 5th percentile of hourly wind capacity factors (output as a percentage of installed capacity) associated with the 100 highest Net Load hours (Load minus wind output) for the 2015-2019 summer Peak Load seasons; this low wind output level is 1,622 MW
[d] Total Uses of Reserve Capacity	4,069	7,001	9,371	7,320	
[e] Capacity Available for Operating Reserves, Normal Operating Conditions [c - d], MW	1,652	(1,280)	(3,650)	(1,599)	See the Background tab for additional details
Less than 2,300 MW indicates risk of EEA1

Notes:

Capacity changes due to planned repower/upgrade projects are reflected in the operational units' ratings upon (1) receipt and ERCOT approval of a new Resource Asset Registration Form (RARF). Projects associated with interconnection change requests that change the MW capacity by more than zero are indicated with a code in the "Generation Interconnection Project Code" column of operational units.

Although seasonal capacity ratings for battery energy storage systems are reported above, the ratings are not included in the operational/planned capacity formulae. These resources are assumed to provide regulation reserves rather than sustained capacity available to meet system peak loads.

* The projects listed in the 'Planned Storage Resources with Executed SGIA' section are all Distributed Generation Resources (DGRs). Since they are 10 MW or less, they are not going through the GINR application process.

Seasonal Assessment of Resource Adequacy for the ERCOT Region

Background

The Seasonal Assessment of Resource Adequacy (SARA) report is a deterministic approach to considering the impact of potential variables that may affect the sufficiency of installed resources to meet the peak electrical demand on the ERCOT System during a particular season.

The standard approach to assessing resource adequacy for one or more years into the future is to account for projected load and resources on a normalized basis and to require sufficient reserves (resources in excess of peak demand, on this normalized basis) to cover the uncertainty in peak demand and resource availability to meet a probabilistic reliability standard.

For seasonal assessments that look ahead less than a year, specific information may be available (such as seasonal climate forecasts or anticipated common-mode events such as drought) which can be used to consider the range of resource adequacy in a more deterministic manner.

The SARA report focuses on the availability of sufficient operating reserves to avoid emergency actions such as deployment of voluntary load reduction resources. It uses an operating reserve threshold of 2,300 MW to indicate the risk that an Energy Emergency Alert Level 1 (EEA1) may be triggered during the time of the forecasted seasonal peak load. This threshold level is intended to be roughly analogous to the 2,300 MW Physical Responsive Capability (PRC) threshold for EEA1. However, PRC is a real-time capability measure for Resources that can quickly respond to system disturbances. In contrast, the SARA operating reserve reflects additional capability assumed to be available before energy emergency procedures are initiated, such as from Resources qualified to provide non-spinning reserves. Additionally, the amount of operating reserves available may increase relative to what is included in the SARA report due to the market responding to wholesale market price increases and anticipated capacity scarcity conditions. Given these considerations, ERCOT believes that the 2,300 MW reserve capacity threshold is a reasonable indicator for the risk of Energy Emergency Alerts given the uncertainties in predicting system conditions months in advance.

The SARA report is intended to illustrate the range of resource adequacy outcomes that might occur. It serves as a situational awareness tool for ERCOT operational planning purposes, and helps fulfill the "extreme weather" resource adequacy assessment requirement per Public Utility Commission of Texas rule 25.362(i)(2)(H). In addition to a base scenario, several other scenarios are developed by varying the value of load forecast and resource availability parameters. The variation in these parameters is based on historic ranges of the parameter values or known changes expected in the near-term. The SARA report is not intended to indicate the likelihood of any of these scenario outcomes.
