

Release Date: May 13, 2020

Preliminary
Seasonal Assessment of Resource Adequacy for the ERCOT Region (SARA)
Fall 2020

SUMMARY

The ERCOT region is expected to have sufficient resource capacity to serve forecasted peak demands in the upcoming fall season (October- November 2020).

The fall SARA includes a 60,966 MW fall peak demand forecast based on average weather conditions at the time of the fall peak demand from 2004–2018. This forecast has been updated to reflect the impacts of COVID-19 on load and the economy.

6,806 MW of new planned capacity is expected to be available at the start of the fall season, including 42 MW of battery storage. Of that, 3,155 MW are expected to be available during fall peak load hours, with gas-fired units contributing 96 MW, wind contributing 1,709 MW, and solar contributing 1,350 MW.

This final fall SARA report includes a unit outage forecast of 14,416 MW. ERCOT's outage forecast is based on the historical average of outages for weekday peak hours for each of the last three fall seasons (2017-2019).

Seasonal Assessment of Resource Adequacy for the ERCOT Region

Fall 2020 - Preliminary

Release Date: May 13, 2020

Forecasted Capacity and Demand

Operational Resources (thermal and hydro), MW	65,908	Based on current Seasonal Maximum Sustainable Limits reported through the unit registration process
Switchable Capacity Total, MW	3,639	Installed capacity of units that can interconnect with other Regions and are available to ERCOT
Less Switchable Capacity Unavailable to ERCOT, MW	-858	Based on survey responses of Switchable Resource owners
Available Mothballed Capacity, MW	0	Based on seasonal Mothball units plus Probability of Return responses of Mothball Resource owners
Capacity from Private Use Networks, MW	2,771	Average grid injection during the top 20 fall peak load hours over the last three years, plus the forecasted net change in generation capacity available to the ERCOT grid pursuant to Nodal Protocol Section 10.3.2.4.
Coastal Wind, Peak Average Capacity Contribution, MW	1,152	Based on 35% of installed capacity for coastal wind resources (fall season) per ERCOT Nodal Protocols Section 3.2.6.2.2
Panhandle Wind, Peak Average Capacity Contribution, MW	1,896	Based on 43% of installed capacity for panhandle wind resources (fall season) per ERCOT Nodal Protocols Section 3.2.6.2.2
Other Wind, Peak Average Capacity Contribution, MW	6,420	Based on 38% of installed capacity for other wind resources (fall season) per ERCOT Nodal Protocols Section 3.2.6.2.2
Solar Utility-Scale, Peak Average Capacity Contribution, MW	1,636	Based on 66% of rated capacity for solar resources (fall season) per Nodal Protocols Section 3.2.6.2.2
Storage, Peak Average Capacity Contribution, MW	0	Based on 0% of rated capacity (summer season); resources assumed to provide regulation reserves rather than sustained capacity available to meet peak loads
RMR Capacity to be under Contract	0	
Capacity Pending Retirement, MW	0	Announced retired capacity that is undergoing ERCOT grid reliability reviews pursuant to Nodal Protocol Section 3.14.1.2
Non-Synchronous Ties, Capacity Contribution, MW	838	Based on net imports during winter 2011 Energy Emergency Alert (EEA) intervals. (Used as a proxy for the fall season due to lack of EEA intervals.)
Planned Thermal Resources with Signed IA, Air Permits and Water Rights, MW	96	Based on in-service dates provided by developers
Planned Coastal Wind with Signed IA, Peak Average Capacity Contribution, MW	330	Based on in-service dates provided by developers and 35% fall capacity contribution for coastal wind resources
Planned Panhandle Wind with Signed IA, Peak Average Capacity Contribution, MW	0	Based on in-service dates provided by developers and 43% fall capacity contribution for panhandle wind resources
Planned Other Wind with Signed IA, Peak Average Capacity Contribution, MW	1,379	Based on in-service dates provided by developers and 38% fall capacity contribution for other wind resources
Planned Solar Utility-Scale, Peak Average Capacity Contribution, MW	1,350	Based on in-service dates provided by developers and 66% fall capacity contribution for solar resources
Planned Storage, Peak Average Capacity Contribution, MW	0	Based on in-service dates provided by developers and 0% fall capacity contribution for storage resources
[a] Total Resources, MW	86,556	
[b] Peak Demand, MW	60,966	Based on average weather conditions at the time of the fall peak demand from 2004 – 2018, this forecast has been updated to reflect the impacts of COVID-19 on load and the economy.
[c] Reserve Capacity [a - b], MW	25,590	

Range of Potential Risks

	Forecasted Season Peak Load / Typical Generation Outages	Forecasted Season Peak Load / Extreme Generation Outages	Forecasted Season Peak Load / Extreme Low Wind Output	Extreme Season Peak Load / Typical Generation Outages	
Seasonal Load Adjustment	-	-		4,694	Based on 2014 fall weather conditions and COVID-19 impact; the extreme fall forecast is 65,660 MW
Typical Maintenance Outages, Thermal	10,028	10,028	10,028	10,028	Based on historical average of maintenance outages for weekday peak hours for October through November (starting in 2017), and accounts for recent capacity rating changes for operational units
Typical Forced Outages, Thermal	4,388	4,388	4,388	4,388	Based on historical average of forced outages for weekday peak hours for October through November (starting in 2017)
95th Percentile Forced Outages, Thermal	-	3,213	-	-	Based on the 95th percentile of historical forced outages for October through November weekdays, for the last three fall seasons (2017 - 2019); the adjustment is the 95th percentile value, 7,601 MW, less the typical forced outage amount of 4,388 MW
Low Wind Output Adjustment	-	-	9,392	-	Based on the 5th percentile of hourly wind capacity factors (output as a percentage of installed capacity) associated with the 100 highest Net Load hours (Load minus wind output) for the 2015-2019 fall Peak Load seasons; this low wind output level is 1,785 MW
[d] Total Uses of Reserve Capacity	14,416	17,629	23,808	19,110	
[e] Capacity Available for Operating Reserves, Normal Operating Conditions (c-d), MW Less than 2,300 MW indicates risk of EEA1	11,174	7,961	1,783	6,480	See the Background tab for additional details

Notes:

Capacity changes due to planned repower/upgrade projects are reflected in the operational units' ratings upon (1) receipt and ERCOT approval of a new Resource Asset Registration Form (RARF). Projects associated with interconnection change requests that change the MW capacity are indicated with a code in the "Generation Interconnection Project Code" column of operational units.

Although seasonal capacity ratings for battery energy storage systems are reported above, the ratings are not included in the operational/planned capacity formulae. These resources are assumed to provide regulation reserves rather than sustained capacity available to meet system peak loads.

The projects listed in the 'Planned Storage Resources with Executed SGIA' section with UNIT CODE entries are Distributed Generation Resources (DGRs). Since they are 10 MW or less, they are not going through the GINR application process.

The retiring hydro unit (CITY OF GONZALES HYDRO) has been removed from the settlement system and is now treated as a load reduction by LCRA

Seasonal Assessment of Resource Adequacy for the ERCOT Region

Background

The Seasonal Assessment of Resource Adequacy (SARA) report is a deterministic approach to considering the impact of potential variables that may affect the sufficiency of installed resources to meet the peak electrical demand on the ERCOT System during a particular season.

The standard approach to assessing resource adequacy for one or more years into the future is to account for projected load and resources on a normalized basis and to require sufficient reserves (resources in excess of peak demand, on this normalized basis) to cover the uncertainty in peak demand and resource availability to meet a probabilistic reliability standard.

For seasonal assessments that look ahead less than a year, specific information may be available (such as seasonal climate forecasts or anticipated common-mode events such as drought) which can be used to consider the range of resource adequacy in a more deterministic manner.

The SARA report focuses on the availability of sufficient operating reserves to avoid emergency actions such as deployment of voluntary load reduction resources. It uses an operating reserve threshold of 2,300 MW to indicate the risk that an Energy Emergency Alert Level 1 (EEA1) may be triggered during the time of the forecasted seasonal peak load. This threshold level is intended to be roughly analogous to the 2,300 MW Physical Responsive Capability (PRC) threshold for EEA1. However, PRC is a real-time capability measure for Resources that can quickly respond to system disturbances. In contrast, the SARA operating reserve reflects additional capability assumed to be available before energy emergency procedures are initiated, such as from Resources qualified to provide non-spinning reserves.

Additionally, the amount of operating reserves available may increase relative to what is included in the SARA report due to the market responding to wholesale market price increases and anticipated capacity scarcity conditions. Given these considerations, ERCOT believes that the 2,300 MW reserve capacity threshold is a reasonable indicator for the risk of Energy Emergency Alerts given the uncertainties in predicting system conditions months in advance.

The SARA report is intended to illustrate the range of resource adequacy outcomes that might occur. It serves as a situational awareness tool for ERCOT operational planning purposes, and helps fulfill the "extreme weather" resource adequacy assessment requirement per Public Utility Commission of Texas rule 25.362(i)(2)(H). In addition to a base scenario, several other scenarios are developed by varying the value of load forecast and resource availability parameters. The variation in these parameters is based on historic ranges of the parameter values or known changes expected in the near-term. The SARA report is not intended to indicate the likelihood of any of these scenario outcomes.
