

NPRR1087 Prohibit Participation of Critical Loads and Generation Resource Support Loads as Load Resources or ERS Resources

Requests on Generators:

- Winterize Plants to harden against another Uri
- Have CEOs or highest-ranking official provide attestations on winterization
- Increased telemetry requirements on Resource status
- Increased reporting requirements for derates and outages
- Provide the public with previously confidential data on outages

MW Impact due to Lack of Natural Gas

At its peak, fuel shortages impacted >30% of Vistra's Gas fleet MWs.

Why NPRR 1087 is needed

- Going into this winter, ERCOT needs to ensure that the fuel supply is protected
- When it is available, the gas mapping will allow ERCOT stakeholders to set a minimum level of protection
- Without the mapping ERCOT's only means to ensure fuel supply is to ask LR and ERS to attest that they are not a "Critical Load or Generation Resource Support Load."
- Reducing the scope of the NPRR is a risk that stakeholders should not put on Texans or ERCOT this winter
