

The Forecast Variability Report contains ERCOT's assessment of the potential for load, wind, and solar conditions to vary between forecasts and actuals. It is posted daily on weekdays, focusing on the conditions two days out.

Updated June 5, 2026

| 06/07/2026 | Load forecast | Wind | Solar | Net load |
|------------|---------------|------|-------|----------|
| On peak    | Low           | Low  | High  | High     |
| Off peak   | Low           | Low  | Low   | Low      |

POTENTIAL ERROR IN MW — THRESHOLDS

| Tier   | Load under forecast | Wind over forecast | Solar over forecast | Net load under forecast |
|--------|---------------------|--------------------|---------------------|-------------------------|
| High   | >3,000 MW           | >3,000 MW          | >3,000 MW           | >4,000 MW               |
| Medium | 1,500–3,000 MW      | 1,500–3,000 MW     | 1,500–3,000 MW      | 2,000–4,000 MW          |
| Low    | <1,500 MW           | <1,500 MW          | <1,500 MW           | <2,000 MW               |
