

Item 7: Overview of Aggregated Distributed Energy Resources (DER) Pilot Program

Kenan Ögelman

Vice President, Commercial Operations

Reliability and Markets Committee Meeting

ERCOT Public

August 15, 2022

- PUCT Commissioners Glotfelty and McAdams have taken the lead in this initiative.
 - The objective is to identify barriers and develop solutions to accommodate the rational development of resources on the distribution system.
 - Several workshops have been held and the next steps are:
 - Establish a Task Force under PUCT purview to identify issues and challenges.
 - The vision is that the Task Force will act as the forum for stakeholder participation.
 - ERCOT will establish a pilot project to examine removing one barrier which is the ability of aggregated resources to provide Ancillary Services (A/S).

Current Thought on Pilot Details

- ERCOT will bring a governing document (consistent with PUCT Rules and Protocols) to the Board of Directors covering:
 - Qualifying Process
 - Exemptions needed from the protocols
 - Requirements covering capacity, location, eligible services
 - Measurement requirements
 - Partnership with the applicable TDSP
