

## **Item 6: Load Forecasting Overview**

*Jeff Billo*

Director, Operations Planning

Board of Directors Meeting

ERCOT Public

August 16, 2022

# Load Forecasting Overview

- **Short-Term Load Forecast (STLF)**
  - 5-minute forecast for the next 2 hours
  - Updated every 5 minutes
  - 1 vendor model and 1 internally-developed model
- **Mid-Term Load Forecast (MTLF)**
  - Hourly forecast for the next 7 days
  - Updated hourly
  - 2 vendor models and 5 internally-developed models
- **Long-Term Load Forecast (LTLF)**
  - Hourly forecast for the next 10-30 years
  - Updated annually
  - 1 internally-developed model

# Mid-Term Load Forecast (MTLF)

- Previous hours' actual load values
- Weather variables\*
- Error correction techniques
- Day of week
- Holiday
- Season

- Operations**
- Outage Coordination
  - Reliability Unit Commitment
  - Risk Assessment

\* 2 weather vendors provide 7 total weather model results for 47 weather stations

- Models include European (Euro), Global Forecast System (GFS), Global Forecast System Ensemble (GENS), North American Model (NAM), and three vendor developed forecasts
- Weather variables include dry bulb temperature, wind speed, cloud cover, dew point, and solar irradiance

# MTLF Challenges

## Weather Forecast

- Multiple weather forecast models
- Two staff meteorologists

## Controllable Load Resource and Other Price Responsive Demand Behavior

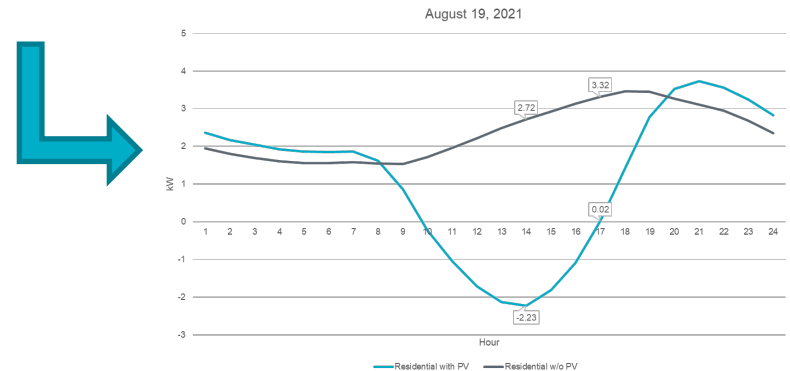

- New initiative to predict behavior
- Large Flexible Load Task Force

## 4 Coincident Peak Response

- Analyze past 4CP occurrences
- Recent initiative to develop 4CP forecast

## Rooftop Solar

- Recent initiative to develop rooftop solar forecast

# MTLF Performance

Mean Absolute Percent Error (MAPE) is a standard industry metric for tracking overall forecast performance

A backcast analysis uses actual weather to provide insights into the load forecast model performance

For more MTLF performance metrics see: <https://www.ercot.com/gridinfo/load/forecast>

# Long-Term Load Forecast (LTLF)

- Historic weather year variables
- Post-processing growth adjustments

- Vendor-provided economic forecast:
- Non-farm employment
  - Housing stock
  - Population

- Residential, Business (Commercial), and Industrial premise count forecast

LTLF

## Finance

- Future year budget planning

## Resource Adequacy

- Capacity Demand and Reserves (CDR) Report
- Seasonal Assessment of Resource Adequacy (SARA)

## Transmission Planning

- Reliability and economic transmission planning studies

# LTLF Challenges

Load drivers that do not follow typical growth patterns are accounted for by way of post-processing adjustments

## Crypto Currency Mining Load Growth

- ERCOT-TDSP engagement
- Large Flexible Load Task Force

## Industrial Load Growth

- ERCOT-TDSP engagement

## Electric Vehicle Load Growth

- Consultant hired to develop EV load growth forecast methodology

## Oil and Gas Load Growth

- Oncor-IHS Markit study
- ERCOT-Bureau of Economic Geology study
- ERCOT-TDSP engagement

## Rooftop Solar Growth

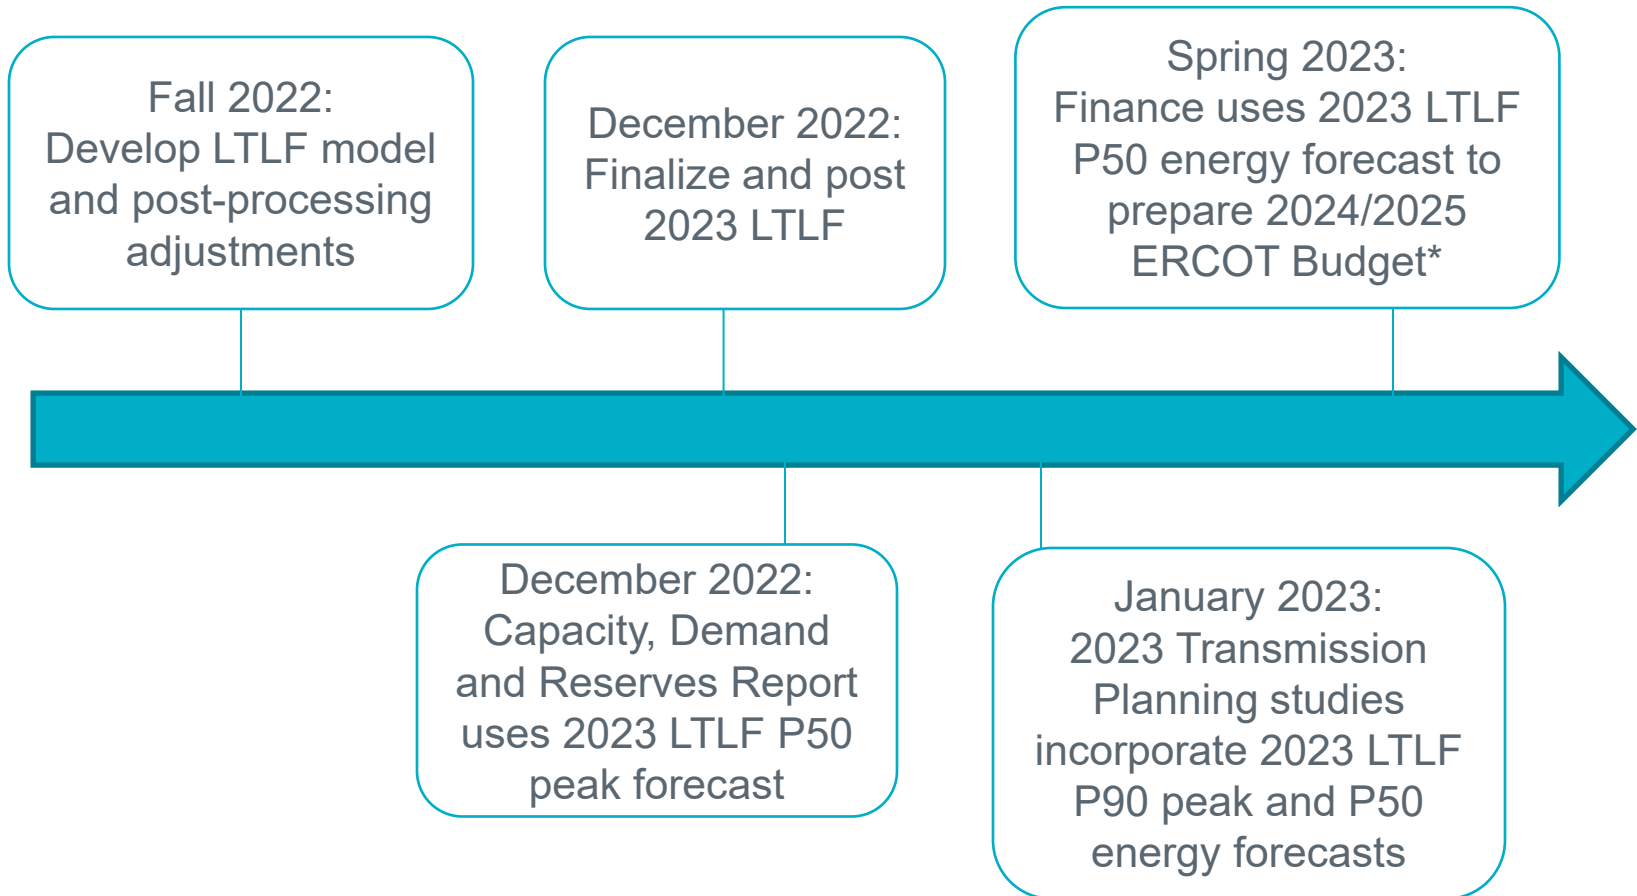

- Supply Adequacy Working Group engagement for capacity growth

# 2022 Long-Term Load Forecast Peak Demand Results

# 2023 Long-Term Load Forecast Timeline

\* May update intra-year revenue projections based on recent meteorological information

# Questions?
