Real-Time Energy Imbalance Concept

The basic idea at any Settlement Point:

$$= (-1) \left(\left[\text{SUPPLIES} \right] - \left[\text{OBLIGATIONS} \right] \right) * \text{RTSPP}$$

Now, fill in the elements

Supplies & Obligations includes DAM & Trade Energy

- DAM Energy settled in hourly MWs
- Trade Energy reported in hourly MWs
- Real-Time Energy Imbalance settles in 15-minute MWs

Hour 0800	Hour 0900
0715	0815
0730	0830
0745	0845
0800	0900

**Multiply DAM &
Trade Energy
by $\frac{1}{4}$ hour**

$$= (-1) \left[\begin{array}{c} \text{DAM Energy Purchases} \\ + \\ \text{Trade Energy Purchases} \end{array} \right] - \left[\begin{array}{c} \text{DAM Energy Sales} \\ + \\ \text{Trade Energy Sales} \end{array} \right] * \text{RTSPP}$$

Each Settlement Point
settled separately

RTSPP = Real-Time Settlement Point Price

Settles Financial
Transactions

**RTSPP = RTRSVPOR + RTRDP +
Simple & Time-Weighted Average (LMPs)**

$$\begin{aligned}
 &= (-1) \left[\left(\begin{array}{c} \text{DAM Energy Purchases} \\ + \\ \text{Trade Energy Purchases} \end{array} \right) - \left(\begin{array}{c} \text{DAM Energy Sales} \\ + \\ \text{Trade Energy Sales} \end{array} \right) \right] * \text{RTSPP} \\
 &\quad + (-1) \left[\begin{array}{c} \text{Settlement Only} \\ \text{Generation (SOG)} \end{array} - \begin{array}{c} \text{Adjusted} \\ \text{Metered Load} \end{array} \right] * \text{RTSPPEW}
 \end{aligned}$$

Each Settlement Point
settled separately

RTSPP = Real-Time Settlement Point Price

Settles Financial
Transactions

**RTSPP = RTRSVPOR + RTRDP +
MW-Weighted & Time-Weighted Average (LMPs)**

RTSPPEW = Real-Time Settlement Point Price
Energy-Weighted

Settles Physical
Energy Consumption

RTSPPEW = **RTRSVPOR** + **RTRDP** +
(MW * Time)-Weighted Average (LMPs)

$$= (-1) \left[\begin{array}{c} \text{DAM Energy Purchases} \\ + \\ \text{Trade Energy Purchases} \end{array} \right] - \left[\begin{array}{c} \text{DAM Energy Sales} \\ + \\ \text{Trade Energy Sales} \end{array} \right] * \text{RTSPP} \\ + (-1) \left[\text{Metered Generation} \right] * \text{RTRMPR}$$

Each Settlement Point
settled separately

RTSPP = Real-Time Settlement Point Price

Settles Financial
Transactions

**RTSPP = RTRSVPOR + RTRDP +
Time-Weighted Average (LMPs)**

RTRMPR = Real-Time Resource Meter Price

Settles Physical
Energy Production

**RTRMPR = RTRSVPOR + RTRDP +
(Base-Point * Time)-Weighted Average (LMPs)**

$$+ (-1) \left[\text{Metered Generation} \right] * \text{RTRMPR}$$

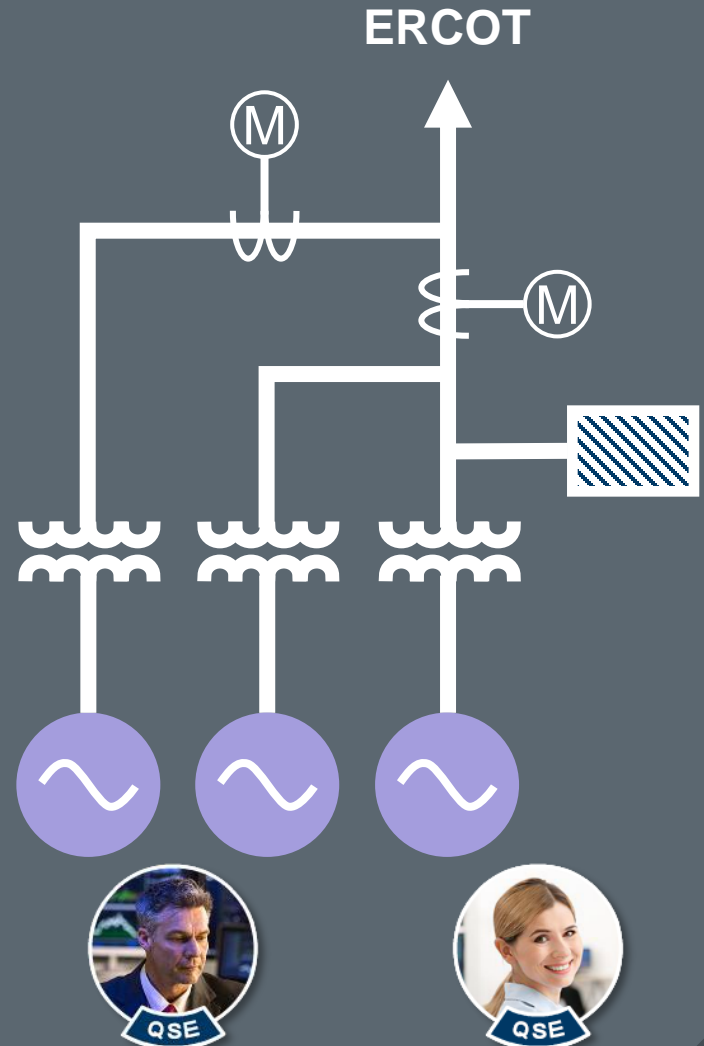

If all Generation Sites
were simple ...

But in reality ...

Many Generation Sites are complex

- Multiple generators per meter
- Multiple owners
- Load and generation

$$\text{Resource Share} = \text{Splitting Percentage} * \text{Site Payment}$$

Splitting Percentage

- QSE Share per Resource
- Calculated from telemetry

$$\text{Site Payment} = \sum(\text{Price} * \text{Meter})$$

- For all Resources at Site
- For all QSE at Site

$$= (-1) \left[\begin{array}{c} \text{DAM Energy Purchases} \\ + \\ \text{Trade Energy Purchases} \end{array} \right] - \left[\begin{array}{c} \text{DAM Energy Sales} \\ + \\ \text{Trade Energy Sales} \end{array} \right] * \text{RTSPP} \\ + (-1) \left[\text{Resource Share of Revenue} \right]$$
