Module 4
Metering

Meter:

A device that measures electrical usage over a period of time.

What are we measuring?

WATTS = (Current) x (Voltage)

Ex: 100 W Light bulb

Energy = Watt-Hours

Ex: (10) x (100 W Light bulbs for 1 Hour)

= 1000 WHr (or 1 kWH)

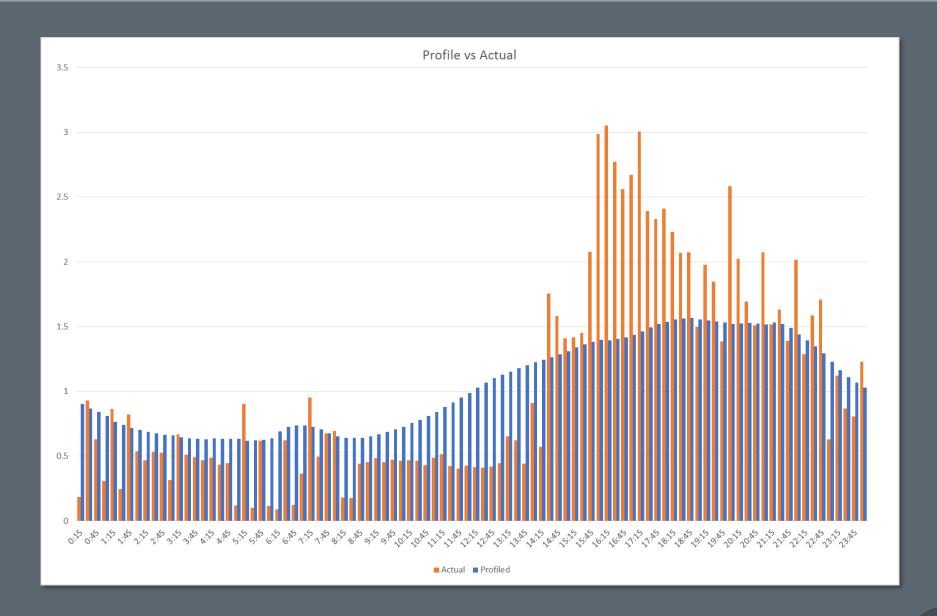

Non-IDR/Scalar/Analog Meter Characteristics

- "Traditional" Meter
- Scalar measurement for an entire month
- Data must be shaped for Wholesale Settlement
- Manual field activities

- Usage is recorded in ~30 day intervals
- Data must be shaped for 15 minute Wholesale Settlement

Interval Data

- Usage is recorded in 15 minute intervals (96 intervals per 24 hrs)
- Data is already shaped for 15 minute Wholesale Settlement

Characteristics

- Wholesale Settlement ready
- Remotely read

AMSR (≤ 200 amp)

Remote connect / disconnect

AMSM

Manual connect / disconnect

Interval Data Recorder (IDR) Meter Characteristics

- Wholesale Settlement ready
- Typically reported monthly
- Predominantly on large customers
 - > 700 kW/kVA demand
- May require manual field activities

AMS benefits to the market

- 99.5% competitive load using interval data
- REP and Customer can see actual usage
- More accurate CR
 Settlement with QSE

AMS benefits to the market

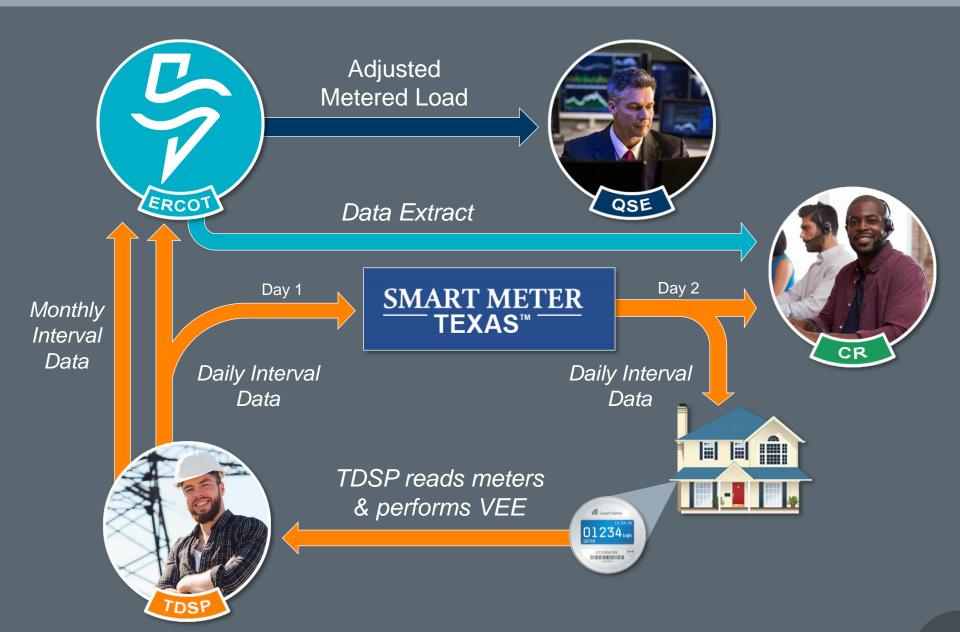

- 73% actual data used on Initial Settlement
- Faster execution of retail market processes

Other AMS Benefits

Allows for pre-pay programs

Allows for demand response

Allows for Time-of-Use rate offerings

Improved service reliability

Early detection of faulty meters or tampering

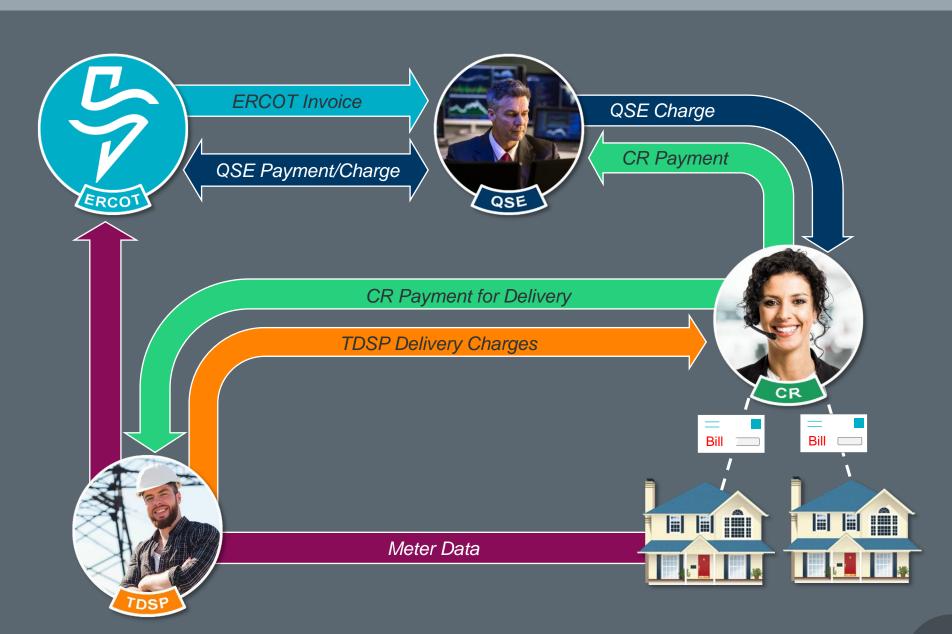

Module 5

Settlement of Retail Load

ERCOT Settles with QSE based on Adjusted Metered Load

Adjusted Meter Load

Unaccounted for Energy

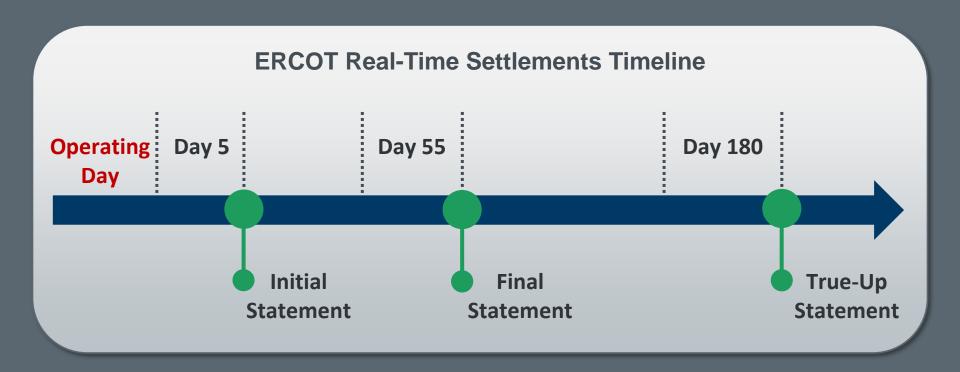

Transmission Loss Factors

Distribution Loss Factors

Aggregation by QSE and LSE

- Each Operating day is settled a minimum of three times
- Most settlement is transacted on the Initial Settlement
