

Oncor and LCRA TSC Muscovy and Voss Lake 345/138-kV Project – ERCOT Independent Review – Status Update

Abishek Penti

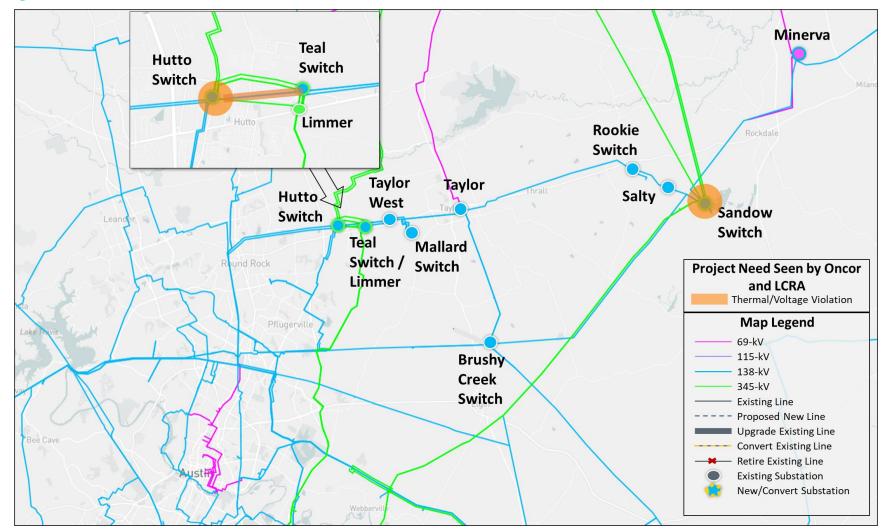

RPG Meeting June 17, 2025

Introduction

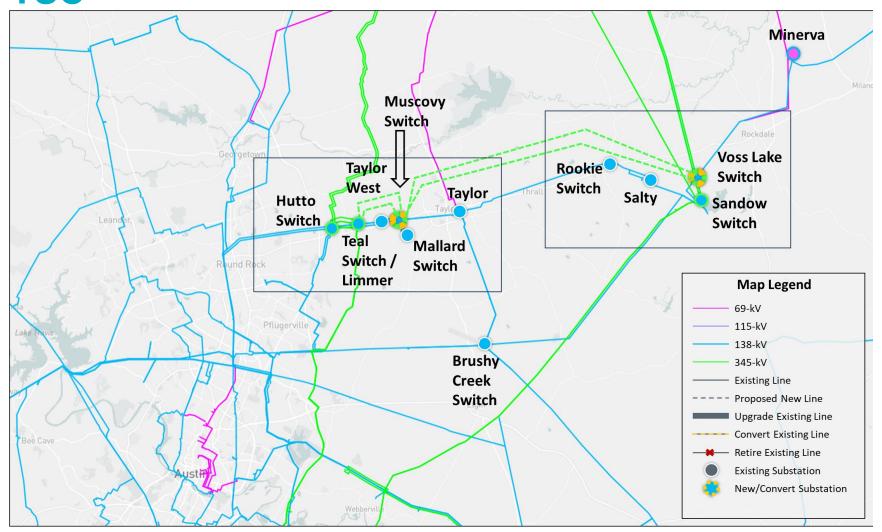

- Oncor and LCRA TSC submitted the Muscovy and Voss Lake Project for Regional Planning Group (RPG) review in April 2025.
 - This Tier 1 project is estimated to cost \$381.83 million and will require a Certificate of Convenience and Necessity (CCN)
 - Estimated in-service date (ISD) is December 2028
 - To address reliability violations seen by Oncor and LCRA TSC
 - Observed similar violations in 2024 RTP (2024-SC28 and 2024-SC29)
- Oncor provided an overview presentation and ERCOT provided the study scope at the June RPG Meeting
 - https://www.ercot.com/calendar/05202025-RPG-Meeting
- This project is currently under ERCOT Independent Review (EIR)

Recap – Study Area Map with project need as seen by Oncor and LCRA TSC

- Establish the new Muscovy 345/138-kV Switch by installing ten 345-kV, 5000 A and twelve 138-kV, 3200 A breakers in a breaker-and-a-half bus arrangement, approximately 3.3 miles east of the co-located 345-kV Limmer Substation (LCRATSC) and 138-kV Teal Switch (Oncor);
 - Install two 345/138-kV autotransformers with normal rating of 700 MVA and emergency rating of 750 MVA
 - Install three 36.8 MVar capacitor banks
 - Ensure all line terminal and associated equipment elements are rated to meet or exceed 5000 A for 345-kV and 3200 A for 138-kV
- Construct a new 345-kV double-circuit transmission line which will require a CCN from Limmer Substation (LCRA TSC) to Muscovy Switch with a normal and emergency ratings of at least 2987 MVA or greater, approximately 4-mile;
- Construct a loop of the existing Teal Switch Pintail Switch 138-kV double-circuit transmission line with a normal and emergency ratings of at least 614 MVA into the new Muscovy 138 kV Switch, approximately 0.1-mile;

- Establish the new Voss Lake 345/138-kV Switch by installing ten 345-kV, 5000 A and nine 138-kV, 3200 A breakers in a breaker-and-a-half bus arrangement, approximately 1.9 miles north of Sandow 345/138-kV Switch;
 - Install one 345/138-kV autotransformer with normal ratings of at least 700 MVA and emergency ratings of atleast 750 MVA
 - Ensure all line terminal and associated equipment elements are rated to meet or exceed 5000 A for 345-kV and 3200 A for 138-kV
- Construct a loop of the existing Sandow Switch to Bell County East Switch 345-kV double-circuit transmission line into the Voss Lake 345-kV Switch with a normal and emergency ratings of at least 2987 MVA or greater, approximately 0.1-mile;
- Construct a loop of the existing Sandow Switch to Temple Switch 138-kV transmission line into the Voss Lake 138-kV Switch with a normal and emergency ratings of at least 614 MVA or greater, approximately 0.1-mile;
- Construct a loop of the existing Sandow Switch to Minerva Switch 138-kV line into the Voss Lake 138-kV Switch with a normal and emergency ratings of at least 614 MVA or greater, approximately 0.1-mile;

- Construct a new 345-kV transmission line which will require a certificate of convenience and necessity (CCN) from Voss Lake Switch to Walleye Creek Switch with a normal and emergency ratings of at least 2987 MVA or greater on double-circuit structures with one circuit installed initially, approximately 2-mile; and
- Construct a new, 345-kV double-circuit line which will require a CCN from Muscovy Switch to Voss Lake Switch with a normal and emergency ratings of at least 2987 MVA or greater, approximately 25-mile.
- Install terminal equipment in existing bays at Limmer Substation to connect both circuits of the new 345-kV double-circuit transmission lines to Muscovy Switch, including two circuit breakers, two switches, six coupling capacitor voltage transformers (CCVTs), and six surge arrestors, as well as two Aframe structures. All associated terminal equipment will have a minimum rating of 5000 A.

Study Assumptions – Load, Reserve, Transmission & Generation

- 2024 Regional Transmission Planning (RTP) 2029 summer peak case was used as the start case
- Load in study area
 - Loads in study area were updated to create the study base case
- Reserve
 - Reserve levels are consistent with the 2024 RTP
- Transmission
 - See Appendix A for a list of transmission projects added
 - See Appendix B for a list of RTP placeholder projects that were removed
- Generation
 - See Appendix C for a list of generation projects added

Preliminary Results of Reliability Assessment – Need Analysis

 ERCOT conducted steady-state load flow analysis for the study base case according to the NERC TPL-001-5.1 and ERCOT Planning Criteria to identify project need

Contingency Category	Voltage Violations	Thermal Violations	Unsolved Power Flow
N-0 (P0)	None	None	None
N-1 (P1, P2-1, P7)	None	None	None
G-1+N-1 (P3)*	None	None	None
X-1+N-1 (P6-2)*	None	17	None

^{*} See Appendix D for list of G-1 generators and X-1 transformers tested

Study Area Map with Violations seen by ERCOT

Next Steps and Tentative Timelines

- ERCOT will continue to evaluate options and provide status updates at future RPG meetings
 - Maintenance outage evaluation
 - Long-term load-serving capability assessment
 - Cost estimates and feasibility assessment
- Generation Addition and Load Scaling Sensitivity Analyses
 - Planning Guide Section 3.1.3(4)
- Subsynchronous Resonance (SSR) Assessment
 - Nodal Protocol Section 3.22.1.3(2)
- Congestion Analysis
 - Congestion analysis may be performed based on the recommended transmission upgrades to ensure that the identified transmission upgrades do not result in new congestion within the study area
- Tentative timeline
 - Final recommendation Q3 2025

Thank you!

Stakeholder comments also welcomed through:
